Course Agenda

Day 1
- Interpreting an Ethernet Network Hardware Layout
- Verifying Communications between Two Ethernet Devices
- Interpreting Basic Data Flow of Host-to-Host Ethernet Communications
- Recognizing Ethernet Data Transmission Types
- Recognizing Layer 2 Switching Functions on an Ethernet Network

Day 2
- Recognizing Ethernet Network Loop Avoidance Protocols
- Interpreting the Network Address Translation (NAT) Scheme for an Ethernet Network
- Accessing Ethernet Switch Information Using CLI Commands
- Recognizing Layer 3 Switching Functions on an Ethernet Network
- Copying and Removing IOS Configuration Files on an Ethernet Switch

Course Description

After completing this course, you should be able to:

- Demonstrate understanding of basic Ethernet networking skills, terminology, and concepts
- Apply these skills when performing advanced network specification, configuration, and troubleshooting tasks

In this course, you will learn how to verify communications between devices, recognize data transmission types, and differentiate between OSI Model Layer 2 and Layer 3 switching functions.

You will also identify the routing process, monitor a switch using Device Manager and CLI commands, and work with IOS configuration files.

This course prepares you to more clearly understand key IT terms and concepts for communicating with other professionals on Connected Enterprise projects.
Who Should Attend
Operations technology (OT) professionals (such as control engineers) and others responsible for installing, configuring, and/or maintaining industrial devices on an Ethernet network should attend this course.

Prerequisites
To successfully complete this course, the ability to perform basic Windows operating system tasks is required.

Technology Requirements
All technology is provided for student use in the classroom by Rockwell Automation. It is not necessary for students to bring any technology with them when attending this course.

Student Materials
To enhance and facilitate the students' learning experiences, the following materials are provided as part of the course package:

- **Student Lessons:**
  - Includes the key concepts, definitions, examples, and activities presented in this course

- **Lab Book:**
  - Provides learning activities and hands-on practice. Solutions are included after each exercise for immediate feedback.

- **EtherNet/IP Procedures Guide:**
  - Provides the steps required to complete tasks common to configuring devices to communicate over an EtherNet/IP network.

- **Cisco IOS Configuration Fundamentals Command Reference:**
  - Contains comprehensive list of switch and router commands

- **Using the Command-Line Interface:**
  - Part of the Cisco Systems Software Configuration Guide (Industrial Ethernet 2000 Switch)
  - Shows more detailed breakdown of Cisco interface

Hands-On Practice
Throughout this course, you will have the opportunity to practice the skills you have learned through a variety of hands-on exercises. Exercises focus the skills introduced in each lesson and are performed on an EtherNet/IP workstation and/or use a variety of software tools.

Next Learning Level
This course expands your skill set and acts as a bridging course for other offerings, such as the Managing Industrial Networks with Cisco Networking Technologies (IMINS) course.

Course Length
This is a two-day course.

IACET CEUs
CEUs Awarded: 1.4

To Register
To register for this or any other Rockwell Automation training course, contact your local authorized Allen-Bradley® Distributor or your local Sales/Support office for a complete listing of courses, descriptions, prices, and schedules.
